

For Immediate Release

## PBS Systems and Dealer-FX

PBS Systems Inc. is excited to announce an integration with Dealer-FX, a PBS Systems partner that provides service retention and service drive tools to automotive dealerships.

This integration provides dealerships using the PBS software the ability to obtain a customer's service, sales and appointment history to make the initial stages of the write-up as efficient as possible. In addition, the service drive can automatically push service appointments and repair orders directly into the dealership's Aristo Appointments and Aristo Service while capturing the correct mileage, op codes, pricing and descriptions, along with customer and vehicle details. This provides the dealership's customers with a consistent and transparent service experience.

### **About PBS Systems**

Currently in its 27<sup>th</sup> year, PBS Systems is a leading provider of DMS software. PBS is Microsoft Windows based, making it the most intuitive and user-friendly DMS available. PBS continuously strives to find ways to help their customers be more productive, more efficient and more profitable.
